INTRODUCTION

Traffic accident data on the rural and urban sections of Montana's Interstate System and rural sections of the Primary System are presented in this report. The report is based on all accidents that were reported to the Montana Highway Patrol during the years 1968, 1969 and 1970. Montana statutes require that an accident must be reported to the Montana Highway Patrol if \$100 or more of property damage is involved or if it caused an injury or death. Legal penalties are provided for failure to report accidents in this category immediately and to submit a written report within ten days.

The first section of the report lists pertinent data by section by Federal Aid Route. The second section lists by route those locations where two or more accidents occurred within one-tenth of a mile during the years 1968, 1969 and 1970. This section is followed by a rural accident summary by Federal Aid Routes and a summary of all accidents occurring on FA routes by county.

The fatality rate per hundred million vehicle-miles of travel, as well as the total accident rate per million vehicle-miles of travel, have been computed for each year of the three year period. Property damage losses have been obtained from the estimates shown on the Highway Patrol accident reports for the years 1968 and 1969. Property damage loss for 1970 was computed by using the National Safety Council's estimate. Total economic loss has been computed by adding the National Safety Council's estimate of costs of deaths and injuries to the reported property damage.

The national estimate of economic loss for the three years are:

	<u>1968</u>	<u>1969</u>	<u>1970</u>
Per Injury	\$ 2,300	\$ 2,500	\$ 2,700
Per Fatality	38,700	41,700	45,000
Property Damage			400

SIGNIFICANCE OF ACCIDENT RATES

Accident data for 1970 was analyzed for accident rate significance. The analysis was made utilizing an adaption of statistical quality control methods.

Using this procedure, limits may be established for accident rate variation caused by chance. Once these limits are obtained, an accident rate falling above or below them may be considered to have causes other than chance and thus, be significant.

It must be understood that this method produces only an indicator of significance and final determination of significance may only be made after detailed investigation and analysis of each situation. Sections having significantly low rates (indicating favorable events) are of value in aiding accident reduction in critical areas.

An asterisk has been placed by the accident rate for any section having a rate which is higher or lower than the limits established.

STATEWIDE SUMMARY

<u>ITEM</u>	<u>1968</u>	<u>1969</u>	<u>1970</u>
Section Length in miles and tenths (Rural mileage - Primary and Interstate Systems)	5,915.0	5,977.5	5,993.0
Average Daily Traffic Volume	1,012	1,041	1,065
Number of Property Damage Accidents	3,283	3,573	3,802
Number of Injury Accidents	2,002	2,066	2,026
Number of Fatal Accidents	151	155	164
Total Number of Accidents	5,436	5,794	5,992
Number of Persons Injured	3,306	3,417	3,205
Number of Persons Killed	176	189	211
Amount of property damage as reported to the Highway Patrol for years 1968 and 1969. 1970 was computed using National Safety Council estimate.	\$5,286,598	\$5,746,200	\$1,520,800
Total economic loss based on the National Safety Council's estimate of the cost of deaths and injuries added to the reported property damage.	\$19,701,598	\$22,170,000	\$19,669,300
Accident rate - expressed as the total number of accidents of all types per million vehicle- miles of travel.	2.5	2.6	2.6
Fatality rate - expressed as the total number of deaths per hundred million vehicle-miles of travel	8.1	8.3	9.1

1970 ACCIDENT STATISTICS

The State map on Plate 1 shows the location of all sections of highway having an accident rate above the State average of 2.6 in 1970. The 409.4 miles of highway shown in red had an accident rate of greater than 5.0 per million vehicle-miles of travel. Sections shown in green, totaling 2,427.2 miles, had an accident rate of from 2.7 through 5.0. Sections at or below the State average of 2.6 accidents per million vehicle-miles of travel total 3,156.4 miles and are shown on the map by means of an open band.

The following tabulation compares the accident and fatality rates on the rural Interstate System (Constructed and present traveled way) and the Primary System for 1970.

	<u>Miles</u>	<u>Ave. Daily Traffic</u>	<u>Number of Accidents</u>	<u>Number of Fatalities</u>	<u>Accident Rate</u>	<u>Fatality Rate</u>

MULTIPLE ACCIDENT LOCATIONS

This section lists by Federal Aid Route those locations by milepost mileage where two or more accidents occurred for the years 1968, 1969 and 1970. It combines those accidents occurring within one-tenth of a mile, thus allowing this variance between accidents with the same milepost reading. All categories are self-explanatory with the possible exception of Accident Type - - an expanded coding table for it is shown below.

TYPE OF ACCIDENT

Ran off roadway

Overtaken in roadway

Pedestrian - Collision with

Rearend, sideways, same direction - Collision with motor vehicle in traffic

Angle - Collision with motor vehicle in traffic

Parked vehicle - Collision with

Railroad train - Collision with

Bicycle - Collision with

Animal - Collision with

Fixed object - Collision with

Other objects - Collision with

Other non-collision

Other and not known
